Ordinary battery cable allows corrosion to creep through your electrical system undetected. This causes premature charging system failures & unnecessary replacement of batteries, starters & alternators. Phillips CLEAR-VU™ allows for early detection of corrosion in your electrical system. A quick check of the cable helps you determine the health of your charging system before you spend time & money on unnecessary repairs.

Below is what happens to battery cable in a typical corrosive environment (*5% magnesium/calcium chloride solution.) Now you can find corrosion before it finds you!

— NEW - Maximum capacity

— 350 hours* - Voltage capacity decreases approximately 12%

— 750 hours* - Voltage capacity decreases approximately 26%
